

With a legacy of the Sorensen Governor Brand and acquisition over 25-years ago, Sorensen Systems continues its focus on hydropower, water and waste-water industries in the United States and Canada. Sorensen Systems has successfully provided turnkey hydropower packages in the 10kW to 500kW range for consideration of the Feed-In Tariff (FIT) Program in the Province of Ontario.

As a Turbine Systems Integrator, Sorensen's design responsibilities included collaboration with several of our OEM partners to provide the most optimum, water-to-wire solutions for small hydro opportunities. Successful projects include Conduit Energy Recovery systems for municipalities and provided net metering capability, remote system control, SCADA integration, protections and monitoring.

Allied Power Controls is a proud member of the Ontario Waterpower Association, and a manufacturer's representative for Sorensen Systems in Canada.
