**Description of Services:**

CRD Energy is focused on small hydroelectric, providing assessment and application services for Small FIT projects. Each member of our consulting team has had more than 20 years of Ontario energy market experience across public or private sectors. We bring a deep appreciation of the complex challenges facing Ontario developers, and can provide you with the guidance and solutions your business needs to successfully navigate the Small FIT process.

Services we offer to clients are leveraged from our previous industry successes, including:

- Successful RESOP, 2010 FIT and 2013 FIT Applications to the Ontario Power Authority (now the Independent Electricity System Operator).
- Expertise in legislation, regulations, and policies affecting federal Priority Permit submissions and provincial site applications, managing the application and submission process to a successful end.
- Experienced in the management of FIT Contracts and the Preconstruction processes.
- Project financing and tax structuring.

CRD operates on a fee-for-service basis for the preparation of Small FIT Applications, but will consider project financing FIT Applications, the preconstruction and/or construction phases within an Owner-Operator, Partnership or Build Own Transfer format at the client's request and, after initial project evaluation.
